August 19, 2013

The chipboard we supply is manufactured from 100% recycled wastepaper fibers. There is approximately 54% post consumer waste in the furnish. The only additive is an organic starch to bind the fibers together.

The chipboard is covered by FDA Regulation 21 CFR 176.260 "Pulp from Reclaimed Fibers."

Most packaging operations involving chipboard use a barrier ply of poly, foil, etc. between the chipboard and the product; therefore, the chipboard is not in direct contact with the food.

Best regards,
